What to do if the following courses are full:

BioMG 1350 (Cell & Developmental Biology)
BioG 1440 (Comparative Physiology)
BioG 1500 (Investigative Biology Lab)

**BioMG 1350 (Cell & Developmental Biology)**

You must register for BIOMG 1350 through Student Center. Student Center does not offer a wait list and enrollment is limited by the number of sections. Check Student Center for section times that fit your schedule during the Add/Drop period. Many students change their schedules at this time and some will drop BIOMG 1350. These spots are filled on first-come, first-served basis so it pays to check frequently. If you are enrolled in BIOMG 1350 but would like to switch sections, you must do this through Student Center. Once the Add/Drop Period starts, look in Student Center for an open section that fits into your schedule. Then use the "swap" option in Student Center to change your enrollment without dropping the course. If you drop the course and someone else takes your place, we will not be able to re-enroll you. If you have questions about the course that are not answered here, please send a note to the course email address at biomg1350@cornell.edu.

**BioG 1440 (Comparative Physiology)**

We expect to have sufficient space in the discussion sections to accommodate all students who want to enroll in BIOG 1440. Check Student Center periodically throughout Add/Drop period, as students often make changes that will result in seats opening up. It is a possibility that the specific section day and time a student is seeking may not be available or that all discussion sections will fill (and remain full). If either of those occur, please do not worry, there are several options and considerations.

- First and foremost, no major in any college requires that you take this course in your first year at Cornell. Rather, students should complete the course no later than the end of the sophomore year, as it is introductory level course.
- Consider taking BIOG 1445: Comparative Anatomy and Physiology instead of BIOG 1440. BIOG 1445 fulfills the Introductory Biology requirement. This course covers similar conceptual material as BIOG 1440, but additionally focuses on comparative anatomy of vertebrate animals through dissection of preserved specimens. BIOG1445 is taught in a mostly self-guided mode, with only one lecture per week instead of two lectures and a discussion. If you are organized and good with time management, and are thinking of attending medical school, this could be the course for you. The additional hands-on exposure to anatomy is very useful.
- Consider taking one of the other introductory biology cluster courses, BIOG 1500: Investigative Biology Laboratory, or BIOEE 1780: Introduction to Evolutionary Biology.
- Spaces in discussion sections of BIOG 1440 will likely open up during January Add/Drop. Check back on Student Center for new openings when Add/Drop opens for you.
- This class will be changed to instructor consent on the first day of this class. If this class is full, attend the first lecture and the section you would like to enroll in, you must fill out an add form indicating 3 section choices that will work with your schedule. If there is an opening you will be sent a permission code to add the class. Biological Science majors taking this course are required to take a letter grade.

**BioG 1500 (Investigative Biology Lab)**

BIOG 1500 does not offer a wait list / make exceptions when labs are full due to safety regulations. However, there are options you may try in order to obtain a seat in a full section. Please note the following same options apply if you want to switch into a full lab section from your current undesired section. Even if all course seats are full, follow these procedures:

*Option # 1:* Check the enrollment of BIOG 1500 in Student Center as frequently as is feasible for you during the Add/Drop period. It is possible that a student who is currently enrolled in the course will drop it (a lot of students change (continued on next page)
their schedule during this time). During the Add/Drop period, empty seats are filled on a first-come, first-served basis. We recommend trying this first, as it is the least complicated.

Option #2: Swapping online during the Add/Drop time period: There is a "Swap" button in Student Center (it looks like a double-sided, bent arrow inside a square button). If the lab you want has an open seat, you can use this swap feature during the "Add/Drop" period to switch into a more desirable lab section --- without dropping your spot in the lecture. Always check this first, you should never need to drop the lecture at all. Please attend the first lecture regardless (On 1/30/18, at 9:05AM in Call Auditorium, Kennedy Hall). That way, if seats in the course open up and you obtain one, you won't be behind on material. If you have any questions that aren't answered here, you can email the course at biolabs@cornell.edu.
